The Memorial & Library Asso.

WESTERLY, R. I.

Presented in memory of the third

NATHAN FELLOWS DIXON,

UNITED STATES SENATOR, 1889-95,

By Grace McClure Dixon,

NOV. 8TH, 1898.

THE

CENSUS OF MASSACHUSETTS :

1885.

PREPARED UNDER THE DIRECTION OF

CARROLL D. WRIGHT,

CHIEF OF THE BUREAU OF STATISTICS OF LABOR.

VOLUME III.

AGRICULTURAL PRODUCTS AND PROPERTY.

BOSTON :

WRIGHT & POTTER PRINTING COMPANY, STATE PRINTERS,
18 POST OFFICE SQUARE.

1887.

TABLE OF CONTENTS.

Analysis of tabular presentations for Volume III. Agricultural Products and Property,	Page xvii-lxii
---	-------------------

TABULAR PRESENTATIONS.

[In the tabular presentations beginning on page 566, the names of counties are printed in "CAPITAL" letters; the names of cities in "SMALL CAPITAL" letters, and the names of towns in "Roman" letters.]

AGRICULTURAL PRODUCTS AND PROPERTY. BY TOWNS,	1-586
---	-------

[A classified showing of agricultural products and property by cities and towns, giving in detail the quantity and value of agricultural products and articles of domestic or home manufacture and of agricultural property, with aggregates of products and property by classified titles, followed by a recapitulation of aggregates, and percentages of value of products of value of property, by counties, cities, and towns, and for the State. For abbreviations of the designations of quantity, see explanatory notes on pages 3-6.]

VOLUME III.

AGRICULTURAL PRODUCTS AND PROPERTY.

ANALYSIS.

The difficulty of collecting the statistics of, and relating to, the Agriculture of the Commonwealth increases with each recurring Census. More inquiries become necessary in order to bring out the facts relating to those crops which are rapidly taking the place of the staple products of the farm, the new products in nearly every instance involving many details and necessitating what might be called much petty work; yet no comparison of the agricultural products of Massachusetts for one period — so far as value is concerned — can be made with the products of any other period without entering upon the collection of minute details of information.

Our farm work becomes more and more complicated. The temporary employment of farm hands and the use of agricultural machinery, the combination of occupations — that of farming with other occupations, — and many features of modern farming in this State, enter into the complications of these conditions, and to arrive at a fairly accurate conclusion as to the value of all products it becomes necessary to increase the scope of the schedule on which agricultural products are returned, and not only to increase the scope but to adjust the increase in such a way as to bring out information which might appear to be, by itself, disconnected, or even valueless, material.

The schedule for the Census of 1885, which is known in the Census law as Schedule No. 4, and on which the Agricultural Statistics for 1885 have been collected, was constructed by the Census officers in constant consultation with, and having the approval of, a special committee of the Board of Agriculture. When the points of inquiry had been fully and specifically discussed, the completed schedule, as approved by the committee of the Board of Agriculture, was submitted, according to law, to

the Governor and Council for their action. The schedule was approved by them March 18, 1885.

Still bearing in mind all the difficulties which have been referred to, and which it was confidently believed had been met so far as the schedule itself was concerned, the Office tried to remove as many difficulties as possible in the enumeration or collection of the statistics by furnishing every farmer with a copy of the schedule in advance of the collection of information called for by it. To this end the enumerators charged with the collection of the statistics relating to the population, and who commenced their duties May 1, 1885, were instructed to return to this Office a complete list of all farmers found in their respective enumeration districts, and also to leave with each farmer a copy of the agricultural schedule. By the Act under which the Census of 1885 was taken, Chapter 181, Acts of 1884, the information concerning agriculture to be collected by the Census related to the products for the year ending November 15, 1885, and to conditions as they existed November 15, 1885, instead of May 1, as had been the case in previous Censuses.

In the winter of 1885 and 1886 a selected force of enumerators, chosen from among those who had been employed in the month of May previous, were designated to collect the statistics of Agriculture for the year 1885. Each farmer had been reminded that the object in view in leaving the schedule with him was not that he should fill it up in full, but to give him an opportunity, in advance, to know what inquiries would be made, and thus enable him to make such memorandums as would aid his memory and ensure complete returns. He was informed that he could use the schedule to record the facts called for as he gathered his crops during the summer and fall of 1885; he was also told that he need not take the trouble to fill the schedule completely, but to keep it with his memorandums until the enumerator for his district should call upon him. Each farmer was also informed that it would be the enumerator's duty, when he called for the schedule, to complete his return if it was deficient, and to correct it if it was erroneous.

It was intended that every person owning, hiring, or carrying on a farm, market garden, orchard, nursery, seed garden, etc., who was engaged in domestic or home manufactures or raising agricultural products, should receive and fill out one of these schedules, no matter how small the quantity or what might be the value of his farm property or of his agricultural products or home manufactures, provided he carried on a farm as a matter of occupation. The farmer was also informed in advance, by the schedule specified, that it was of importance to every one engaged in developing the natural resources of the Commonwealth that the fullest and most correct return possible should be obtained from him; that no producer should allow himself to perform his duty in a careless or imperfect manner; that the facts supplied by him would not be used as a basis of any system of taxation or other liability, and that the information secured from him would be presented in the Census abstract by figures

only, the names of persons in no case being printed. He was also informed that the enumerator was bound by law and by his oath of office to consider the answers as strictly confidential. These precautions, both in the construction of the schedule and in its distribution, were thought ample to secure a very complete enumeration of all the information necessary relative to the home manufactures and agricultural products and property of the Commonwealth for the Census year.

Under the law, the products for the year ending November 15, 1885, were called for and the conditions of farm property, such as land, buildings, machines, implements, domestic animals, fruit trees and vines, silos, etc., were to be returned as they existed on November 15, 1885.

The facts were collected on the schedule specified, and the results are herewith presented in the form required by the Census law.

While this volume appears a year later than the corresponding volume relating to Agriculture in the Census of 1875, it should be borne in mind that it relates to facts of a year later; that is, the Agricultural volume in the Census of 1875 related principally to the crops for 1874, and was published December, 1876, while this volume relates to the facts concerning Agriculture for the year ending November 15, 1885, and is published December, 1887, relatively the same as ten years ago. In speaking of comparisons, however, instead of saying 1874 and 1885, we shall speak of the facts as shown by the Censuses of 1875 and 1885.

In the actual work of the enumeration, it was proved that the schedules left in May by the population enumerators received but little, if any, attention by the farmers themselves, and between 5,000 and 6,000 were lost or thrown away. The farmers, as a rule, took but little interest in the matter, and in many cases avoided the enumerator, thus adding greatly to the expense of collecting the information required by law. Schedules were ultimately obtained from all farmers whose names were returned to the Office by the enumerators in May as engaged in agriculture, and any omissions in the lists or returns were supplied from the best information obtainable.

In spite of the statements made on the schedule, an erroneous impression prevailed among the farmers that the income of the farmer, and not the value of the products of the farm, was wanted, but these extraneous items of income, when included, were carefully eliminated. It was also thought that their statements would in some way affect the valuation of their property for taxation. This is the usual difficulty in all Censuses of property, and it is quite impossible to avoid it. The result is that the valuation of property as returned is undoubtedly, as a rule, too low.

The efforts of the Census Office to secure complete and satisfactory returns of dairy products have not been very successful. Every effort was made to prevent the weaknesses in this respect resulting from the enumeration of 1875. The schedule for 1885, prepared with the care which has been specified, and after a great deal of consideration spe-

cially devoted to that part of it which related to dairy products, comprehended inquiries which called for the following matters :

- Quantity of milk used by family.
- Quantity of milk made into butter by family.
- Quantity of milk made into cheese by family.
- Total quantity of milk used by or in family.
- Quantity of milk sold to cheese factories.
- Quantity of milk sold (not including that sold to cheese factories).
- Total quantity of milk sold.
- Total product of milk (used by or in family, or sold) during the Census year.
- Milch cows supplying this total product of milk.
- Quantity of butter made by family.
- Quantity of cheese made by family.

By the foregoing questions it was expected that information would be given which would enable our agricultural scientists to get the exact facts relating to every phase of the dairy business ; but again a comparative failure has attended the effort. For, in some cases, milk from which cream was sold to the creameries was given at the price of new milk, the value of the cream also being given. In other cases the value of the cream sold was given, and the milk was returned as of no money value, such return being accompanied with a statement that it was fed to swine. In many cases where cream was sold to co-operative creameries, the value of the cream, milk, and butter was given, but the butter was returned as having been made by the family. Where calves had been fattened an estimate had been made of the quantity of milk necessary for the fattening, and the value of the milk returned in such cases at the value placed upon or obtained for the calves. These are a few examples only of the complications which arise when an attempt is made to secure exact information relative to dairy products. There is no branch of agricultural statistics so difficult of classification, and only by the employment of experts, thoroughly familiar with all the features connected with dairy work throughout the entire State, can the statistics of dairy products be made scientifically satisfactory in any census. The Office has been obliged, therefore, to attempt to do no more with the dairy question than to return the total quantity and value of milk at the price of new milk, the total quantity and value of cream sold or used as cream, and the total quantity and value of butter and cheese made on farms. The quantity and value of butter and cheese made by creameries is given in the Census volume relating to Manufactures.

The facts given in this connection are of great value and have been limited to those points which offer the greatest accuracy, but in so many cases the difficulties raised have been so great, that only disappointment would have been the result of any attempt to classify dairy products in accordance with the schedule approved by the committee of the Board of Agriculture. While those interested in such matters will be greatly disappointed, their disappointment cannot exceed that of the Census Office,

the officers of which content themselves with the disappointment limited to the facts themselves rather than to one made up of deceptive statistics.

The Census of 1875 clearly proved to our people that agriculture was not on a decline in this State. The facts showed, to be sure, that the great staple products — those which come to mind when we think of old-fashioned farming — were gradually being replaced by minor, but more valuable, crops. The total value of all products, however, was encouraging to the farming interests of the Commonwealth, and answered emphatically the criticism that the farms of Massachusetts were losing their importance. Massachusetts is not a great farming State, and it does not compete with the West. It has its own features of farm industries, however, and these are valuable and should be fostered, and it is as essential that the facts relating to them should be collected and made known at stated periods as it is that the facts relating to our population and manufactures should be collected and published. The question may well be asked, however, whether there may not be a simpler and less expensive method of collecting these agricultural facts. Experience in three Censuses inclines the writer to the view that a cheaper and yet reasonably satisfactory method might be adopted. It is impossible to persuade many farmers that the facts are not wanted for purposes of taxation, and so far as property is concerned the Census enumerators, as a rule, secure simply the values which are given to the assessors. A proposition that the assessors of the cities and towns collect the main facts relating to farm property and products, once in five or ten years, is one which should meet the careful consideration of the legislature prior to the taking of the next State Census.

It should be remembered that the abstracts given in this volume relate entirely to farms, market gardens, orchards, nurseries, seed gardens, etc., and that no facts returned are for village lots, products of small house gardens, or of property not on farms, the Census law contemplating simply an account of the farm business of the Commonwealth.

Special features of the Census will be brought out in this Analysis as each table is treated.

AGRICULTURAL PRODUCTS AND PROPERTY (page 1) is the title of the first table and covers, with its proper recapitulations, 586 pages. This table presents a picture of the farm work of each city and town in the Commonwealth, with aggregates for each. The "Products" are classified as to titles, and alphabetically under each title as to details. The classified titles, those given in italics, are for animal products, dairy products, food products, etc., etc., while under each of such separate titles the details are stated, and the quantity and value of each article produced are given. Under "Property" the classification covers land, buildings, machines, implements, etc., domestic animals, etc., and fruit trees and vines, and under each of these titles the specific articles forming the classification, together with the quantity and value of each, are given. For each city and town the "Aggregates" bring into a small table the value

of products and property, by classified titles, so that one is enabled to see at a glance the relation of products to property, and the values in detail under each, so far as the classification is concerned. A very cursory examination of this table by towns shows the great diversity of the products of our farms, and while in many respects some of the items appear trifling, experience shows that they are essential, and that the aggregates for any town usually surprise the inhabitants thereof, and even the farmers themselves. They are not aware that they are producing so much in value or so many different things.

Turning to the recapitulation of aggregates of products, which covers pages 566-577, the results for the counties and the State being shown on pages 576 and 577, it is found that the total value of products for the State, for the year 1885, amounted to \$47,756,033. This, as compared with 1875, on a gold basis, is an increase of 28.82 per cent. This emphasizes the statement that Massachusetts not only holds her own, so far as the work of her farmers is concerned, but makes a reasonable progress each decade of years. In 1865 the total value of the farm products of the State was, in gold, \$32,027,821; in 1875, on a gold basis, \$37,073,034; and in 1885, as stated, in gold, \$47,756,033. The relative rank of the counties and the total value of products of each under the present Census is as follows:

Worcester, with \$9,385,744, is first in rank; Middlesex, second in rank, having a total product of \$8,030,965; third, Essex, \$4,412,618; fourth, Berkshire, \$4,400,025; fifth, Franklin, \$3,939,993; sixth, Hampshire, \$3,794,173; seventh, Hampden, \$3,510,429; eighth, Bristol, \$3,444,914; ninth, Norfolk, \$2,639,313; tenth, Plymouth, \$2,343,878; eleventh, Barnstable, \$950,175; twelfth, Suffolk, \$608,985; thirteenth, Dukes, \$211,320; fourteenth, Nantucket, \$83,501.

To show the relative proportion of population of each city and town to the others, and the relative proportion of the value of farm products, and thus the comparative rank for agriculture and for population, the following table has been prepared. From this table it is seen that Worcester ranks first in agriculture and second in population, while Boston ranks second in agriculture and first in population. Boston's rank in agriculture is secured largely by the great value of her dairy and greenhouse products.

CITIES AND TOWNS.	Counties	Total Population	Total Value of Agricultural Products	RELATIVE RANK

Referring again to the recapitulation on pages 576 and 577, for the State, it will be seen that the total value of cereals—this total value being \$1,855,145—is less than that of either animal products, dairy products, poultry products, wood products, fruits, berries, and nuts, hay, straw, and fodder, meats and game, or vegetables. These figures show the great changes in the character of farm work. The dairy products have risen from \$7,901,663 (in gold) in 1875 to \$13,080,526 under the present Census. The analysis of the results for the different products, and the comparison of their values with those of other years, will be made when considering the agricultural products by name.

The second recapitulation which claims attention covers pages 578–583, and shows the aggregates of farm property for each city and town, the State and county totals being given on page 583, where it is seen that the total value of agricultural property, consisting of land, buildings, machines, implements, domestic animals, and fruit trees and vines, was \$216,230,550. This sum is practically the capital which produces \$47,756,033 worth of products, which product is 22.09 per cent on the capital invested. Out of this per cent of product on capital must be

paid all the expenses of production of whatever nature, and from it must come, of course, the profit to the farmer.

The total property is divided among the counties in the following order: Middlesex first, having farm property to the value of \$42,161,569; second, Worcester, \$39,353,725; third, Essex, \$20,894,348; fourth, Berkshire, \$20,290,569; fifth, Norfolk, \$15,295,848; sixth, Hampden, \$14,787,007; seventh, Bristol, \$14,038,628; eighth, Hampshire, \$13,790,502; ninth, Franklin, \$13,538,843; tenth, Plymouth, \$11,520,546; eleventh, Suffolk, \$5,840,385; twelfth, Barnstable, \$3,439,733; thirteenth, Dukes, \$1,020,120; fourteenth, Nantucket, \$258,727.

From the table on pages 584-586, showing the percentages of value of products of value of property, we find that the value of the total farm products of the State is equal to 22.09 per cent of the value of the total farm property. The highest figure is found in Franklin County, where the percentage is 29.10, and the lowest in Suffolk County, as might be expected, where it is 10.43 per cent. The percentages for each town in this connection are shown in the table referred to.

AGRICULTURAL PRODUCTS BY NAME (page 587) is the title of the second great table of details, and embraces 150 pages.

The recapitulations for the State are given on pages 730-735. The first recapitulation shows the facts concerning the agricultural products by name in accordance with specific details under the classified titles, as shown in the preceding table for each city and town in the Commonwealth. The recapitulation of agricultural products by name is in itself practically an analysis, and is all that demands attention at the present time.

As the value of figures relating to products is more decidedly brought out by comparison, we have placed the leading facts shown in this recapitulation beginning on page 730 in comparison with like facts, so far as it is possible to make them harmonious, for the years 1845, 1855, 1865, and 1875. This table covers the true bases of comparison; that is, quantity, average value, and, whenever it is possible to apply it, acreage. Values are chiefly interesting as indicating the average value of a specified quantity of an article at different periods. It must be remembered that in 1845, 1855, and 1885 gold was the standard, but in 1865 and 1875 all values should be reduced to a gold basis. This can be done by dividing the currency value for 1865 by 1.57, and for 1875 by 1.12.

The table which follows gives only the chief products, and principally those where, as it has been said, comparisons can be made for two or more Census years. Some products have been added for 1885, which were not shown for previous Census years.

PRINCIPAL PRODUCTS FOR 1845, 1855, 1865, 1875, AND 1885.

[The returns in 1845 included "poultry" with eggs; in 1855, "eggs" with poultry; and in 1865, "other excellent vegetables" with beets and "tomato plants" with tomatoes.]

† Premium, 1.12.

‡ Eleven twenty-fourths.

The study of this comparative table is most interesting. The apple crop shows an increase over 1875 of nearly 1,300,000 bushels but the value is much less. The production of butter has been increased nearly 2,000,000 pounds, while the cranberry crop ran from 36,728 barrels in 1875 to 105,106½ barrels in 1885.

The production of Indian corn has been greatly increased. In 1875 it was 1,040,290 bushels but is now more than double that, being 2,147,390 bushels. The acreage of corn in 1875 was 29,193¾ acres; in 1885, 48,885.19 acres. The egg crop has more than doubled in quantity; ten years ago there were 3,446,530 dozen and in 1885, 7,072,187½ dozen. English hay shows some decline, running from 526,490 tons in 1875 to 430,026 tons in 1885; but in the crop of meadow hay there has been an increase of over 10,000 tons.

The quantity of milk has been carried from 35,698,159 gallons in 1875 to 72,528,628 gallons in 1885. The production of oats is now 619,667½ bushels as against 457,710 bushels ten years ago.

The quantity of potatoes in 1875 was 3,630,546 bushels and in 1885 3,584,505 bushels. The wheat crop has been constantly falling since the first State Census in 1845, when it was 47,986 bushels; in 1855, 41,003 bushels; in 1865, 39,709 bushels; in 1875, 13,749 bushels; while in 1885 it fell to 7,160½ bushels, which gives 3½ ounces of wheat to each inhabitant in the Commonwealth for the year 1885.

The wool products, taking all kinds of wool, show an increase of 50,000 pounds in round numbers.

Many other comparisons of a general nature will readily suggest themselves to those who care to make them.

From this comparison table, however, we draw the material for a more extended comparison of the leading agricultural products for the years 1875 and 1885, the currency values for 1875 being reduced to a gold basis. The presentation for products consists of three tables. The first shows comparative values with percentages of advance or decline. The second shows comparative quantities with percentages of increase or decrease. The third table brings into comparison the percentages of advance or decline in values and of increase or decrease in quantities.

COMPARATIVE VALUES OF AGRICULTURAL PRODUCTS—1875 AND 1885.

From these tables it is seen that apples have fallen off one-third in value and that the production has increased nearly 40 per cent. Cheese has declined 18.39 per cent in value and has fallen off apparently nearly three-fourths as regards quantity. This is a fact, no doubt, as regards the farm, but the statistics of Manufactures, under which heading cheese is now returned as a food preparation, will show that this decrease in quantity is due largely to a change rather from agriculture to manufactures. Cranberries have fallen off over 25 per cent in value but have increased 186.18 per cent in quantity. Grapes have declined in value but there has been a great increase in production. Indian corn has fallen off nearly one-third in value but the quantity is more than double that in 1875. Milk has declined slightly in value but the product is more than doubled. Manure shows no change in value but a gain of more than fifty per cent in quantity. Poultry has fallen off 15.00 per cent in value but the production has increased 116.30 per cent. Strawberries show a fall of more than one-third in value but a gain in quantity of nearly 240 per cent. The other comparisons in the table are fully as salient as those cited.

For convenience of analysis, tables similar to those for products are supplied below for the leading items of property, with the same comparisons on a gold basis for the years 1875 and 1885.

Grape vines,		—	—	59.11	—

From the third table of the presentation it is seen that cultivated land has advanced almost five per cent in value and has increased nearly three per cent in acreage. Horses show a decline of a little more than four per cent in value but they have increased very nearly 15 per cent in number. Milch cows have declined nearly 12 per cent in value but are nearly one-third more than in 1875. Pigs have fallen off 30 per cent in value but have increased nearly 70 per cent in number. Apple trees and grape vines have increased both in value and number. Many other valuable comparisons can be made from the table.

In the case, undoubtedly, of several products and articles of property some of the increase in quantity or number is not actual but is due largely to a more thorough enumeration in 1885. This statement applies particularly to cranberries, strawberries, and pear trees, and, also, to a few others of minor importance.

Reference has been made to the classified titles under which the details of products and property have been arranged. By adopting this form of classification articles of a similar or related nature have been brought together under distinctive and expressive headlines, such as, for products, "Dairy Products," "Poultry Products," "Cereals," "Hay, Straw, and Fodder," "Vegetables," etc., and, for property, such as "Land," "Buildings," etc.

With a view of showing the relative importance of these various classifications we have prepared the table which follows, in which the total value of products for 1885 is considered as 100 per cent, and the total value of property for 1885 as 100 per cent. Under these general headings, we show the classified heads and under each classified head the leading lines of detail and opposite thereto the respective values and the relative percentages.

This table shows at a glance the leading products and items of property. Dairy products, 27.39 per cent, hay, straw, and fodder, 24.36 per cent, and vegetables, 10.95 per cent, represent 62.70 per cent out of the total 100 per cent, leaving but 37.30 per cent for all other kinds of products. As regards property, the land represents 51.19 per cent, the buildings 34.42 per cent, while but 14.39 per cent is left to cover all the other property upon the farms, market gardens, etc., of the Commonwealth.

By a comparison of the percentages for Products and for Property we see that although hens and chickens represent but 0.44 per cent of Property that poultry products amount to 4.67 per cent of the total value of Products. In the case of milch cows which represent but 2.85 per cent of the total value of Property the resulting dairy products cover 27.39 per cent of the total value of Products. Hay represents 20.26 per cent of the total value of Products while the value of the land used for the hay crop, as shown on page 817, represents 17.12 per cent of the total value of Property.

From the recapitulation of agricultural products by name, pages 730 to 734, we derive a table showing the average quantity of the leading articles produced by each person, that is, for each farm return. The average value for each person or for each farm return is shown in the recapitulation to which we have just referred.

AGRICULTURAL PRODUCTS. AVERAGE QUANTITY PRODUCED.

PRODUCTS.	Basis	Quantity	Number of Persons making return	Average Quantity Produced
Apples,	bushels	4,545,833	34,378	132

Wool: other than merino or Saxony,	pounds	212,893 $\frac{1}{2}$	2,121	100

The principal results show a product of 132 bushels of apples to each person raising apples, 374 pounds of butter for each person making butter for sale, 12 tons of English hay for each person cutting English hay, 3,658 heads of lettuce for each person raising lettuce, 2,065 gallons of milk for each person selling milk from the farm, 100 bushels of potatoes for each person raising potatoes, and 100 pounds of wool sheared for each person. The other items can be considered as well by a reference to the table as by a repetition in text.

From the recapitulation of agricultural property by name, pages 817 and 818, we are able to prepare a table showing the average quantity of the leading articles of property owned by each person, that is, returned upon each farm schedule. This table is considered in connection with the analysis of a similar table for products, as a matter of convenience, rather than as a part of the detailed analysis of agricultural property.

AGRICULTURAL PROPERTY. AVERAGE QUANTITY OWNED.*

CLASSIFICATION OF PROPERTY.	Basis	Quantity	Number of Persons making return	Average Quantity Owned
<i>Land.</i>				
Hay (used for),	acres	623,521 $\frac{1}{4}$	43,043	14.49
Principal crops (used for),	acres	177,210 $\frac{7}{8}$	33,649	5.27
Permanent pasture,	acres	1,259,740 $\frac{3}{8}$	38,717	32.54
Woodland: of thirty years' growth or less,	acres	992,563 $\frac{1}{4}$	33,305	29.80
<i>Buildings.</i>

Pear trees,		356,991	24,778	14.41

* Includes land, etc., hired and worked on shares.

From this table we learn that the Massachusetts farmer, on the average, has 14.49 acres of hay land, 32.54 acres of permanent pasture land, 29.80 acres of young woodland, and only 5.27 acres devoted to the cultivation of his principal crops. There is a slight excess of dwelling-houses, barns and cultivators over owners, and more than two plows to each person making return. Nearly 50 hens and chickens, on the average, belong to each owner, nearly two horses, and nearly five cows. The apple trees on each farm, on the average, number 66, and about 14 $\frac{1}{2}$ pear trees are returned by each owner. The fractional results, above given, do not represent actual facts but must be considered as indicative averages only.

It should be remembered that the statement regarding acreage is one surrounded by considerable difficulty and for this reason it has been found necessary to omit in the town showings the acreage devoted to specific crops. The universal answer of the farmer was that the second planting of the land, and the growing of certain crops with others, made any statement or estimate as to acreages devoted to each specific crop not only deceptive but in many cases valueless, except, of course, in instances where a very large tract was planted with one product. A showing is made for the State, however, on page 735, which presents acreage for the principal agricultural products, and shows, in addition, for each of the seventeen crops specified the average yield per acre and the average value of yield per acre. In the comparison table of principal products

for 1845, 1855, 1865, 1875, and 1885, previously shown in this Analysis (pages xxx-xxxii), the results for these seventeen crops for 1885, so far as acreage and yield per acre are concerned, are brought into comparison with similar showings for 1875 and previous years. An analysis of these results as regards acreage and average yield per acre for the Census years 1875 and 1885 discloses some interesting facts.

We find that the acreage devoted to the culture of barley has increased from 1,828.37 acres in 1875 to 2,219.75 acres in 1885. The average yield per acre remains about the same, being 25.50 bushels in 1875 and 25.64 bushels in 1885. Buckwheat has also increased in total acreage, showing 4,202.21 in 1885 as compared with 3,609.25 in 1875. The average yield per acre has fallen off slightly from 13.75 bushels to 13.22 bushels. Indian corn shows a remarkable increase in acreage, advancing from 29,193.75 in 1875 to 48,885.19 in 1885. The yield of bushels per acre has also advanced from 35.75 in 1875 to 43.62 in 1885. No comparison as regards acreage is possible in the case of cranberries, as in 1875 the number of acres was not returned.

Clover hay shows an increase in acres from 2,959 in 1875 to 11,850.11 in 1885, and an increase in the yield of tons per acre from 1.13 tons to 1.46 tons. English hay shows a large falling off in acreage, there being but 393,082.85 acres in 1885 as compared with 509,294 acres in 1875. The average yield per acre shows a slight increase, being 1 ton in 1875 and 1.07 tons in 1885. Meadow hay shows a slight increase in acreage, from 130,792 in 1875 to 137,257.04 in 1885. There is also a slight increase in the yield of meadow hay, being 0.92 of a ton in 1885 as compared with 0.88 of a ton in 1875. Millet hay shows an increase in acreage from 1,619 in 1875 to 5,399.82 in 1885, and an advance in yield per acre from 1.50 tons to 1.56 tons. The returns for salt hay for the two Census years are very nearly the same, showing 23,519 acres in 1875 and 23,009.48 acres in 1885. The average yield per acre in both years was the same, being 0.96 of a ton. In the returns for 1885 we have, also, 48,110.11 acres upon which hay was raised, but the kind of hay raised thereon was not stated. If this entire acreage were added to the acreage for English hay it would still show a large falling off for English hay, so we may decide that there has been a decrease in the acreage of land devoted to the raising of English hay.

Oats show an increase in the total acreage, having advanced from 14,614.25 in 1875 to 18,235.40 in 1885. There was a slight increase in the yield per acre, being 31.25 bushels in 1875 and 33.73 bushels in 1885. The acreage devoted to onion culture has increased from 1,045 in 1875 to 1,580.44 in 1885. The average yield per acre shows a large falling off, being but 174.71 bushels in 1885 as compared with 344.25 bushels in 1875. Attention is called to the explanatory note on page 735 which gives the reasons for the comparatively small average yield per acre for onions. Potatoes seem to be a stable crop, for the acreage in 1875 was

33,616 and in 1885, 33,858.34. The average yield per acre in 1875 was 108 bushels and in 1885, 103.12 bushels. Rye shows a falling off, having declined from 21,351 acres in 1875 to 18,350.70 in 1885. The average yield per acre shows a slight increase, having advanced from 11.75 bushels in 1875 to 12.94 bushels in 1885. No comparison is possible in the case of strawberries as the acreage was not returned in 1875. Tobacco shows a decline, the acreage having fallen from 3,757.63 in 1875 to 2,673.68 in 1885. The yield per acre in pounds has also fallen off from 1,595 in 1875 to 1,548.70 in 1885. In 1875, 677.25 acres in the Commonwealth were devoted to the culture of wheat; in 1885, but 253.95 acres. The average yield in bushels per acre also declined from 20.33 to 16.06.

AGRICULTURAL PROPERTY BY NAME (page 737) is a presentation of farm property in detail by name under each of the classified titles, by counties, cities, and towns, and for the State, and occupies 80 pages.

The recapitulation of agricultural property by name, for the State, on pages 817 and 818, shows as regards each and every item of property the quantity owned, the total value, the average value, the number of cities and towns for which returns are made, the number of persons making return, and the average value of the quantity of each kind of property owned by each person making return.

This table contains some novel features concerning agricultural statistics, and brings out the individuality of ownership of all the property necessary for the farming work of the State. It must be borne in mind, however, that this property relates only to farms, and comparisons must not be made with the annual returns of assessors.

The assessors in their returns to the Secretary of the Commonwealth each year include all lands, whether farming, town, or otherwise, and all animals, whether owned on farms or by others; as, for instance, for 1885 the assessors returned 151,994 horses; these returns include all horses, while the table under discussion shows but 61,004 horses, these latter being simply the horses used and owned on farms. So, too, the assessors returned 167,817 cows, including, of course, not only the cows owned on farms but those owned by people not having farms; the number of cows owned and kept on the farms was 162,847.

To bring out the valuable lines of information in text form would require that the recapitulation be again presented here, so we shall confine the text consideration to the leading articles of property, and refer the reader to pages 817 and 818 for the complete presentation.

The total value of land used for hay is \$37,010,507, or \$59.36 per acre: 43,043 persons (every city and town in the State being represented) owned, on an average, \$859.85 worth of hay land. Considering land used for principal crops, 33,649 persons residing in 341 different cities and towns owned, on an average, \$323.37 worth. Permanent pasture land is an adjunct of nearly every farm, and 38,717 persons living in 348 cities and towns owned \$546.54 worth on an average. Woodland of thirty

years' growth or less is owned by 33,305 persons in 339 cities and towns, the average value to each being \$456.09. Of woodland having a growth of over thirty years, there is owned by 14,067 persons \$623.48 worth, on an average, to each person.

There are 46,109 dwelling-houses and 50,275 barns on the farms of the State. This number of houses is owned by 41,599 persons, the average value of each house being \$1,009.76, and the average value to each person, \$1,119.23; the barns are owned by 40,686 persons, the average value of each barn being \$408.70, and the average value to each person, \$505.02. Every city and town makes a return of dwelling-houses and barns on farms.

The leading details under "Machines, Implements, etc." are cultivators, harrows, implements, and plows. Taking each of these articles of property in order, we find that 24,827 persons, in 343 cities and towns, own, on an average, \$5.09 worth of cultivators; 25,857 persons, in 347 cities and towns, \$8.12 worth of harrows; 33,005 persons, in 348 cities and towns, \$15.91 worth of general farming implements; and 30,978 persons, in 348 cities and towns, \$10.42 worth of plows.

Domestic animals on farms include all kinds. The leading kinds are heifers, hens and chickens, hogs, horses, milch cows, oxen, and pigs. The average value of heifers, as shown by returns from 15,503 persons, living in 348 cities and towns, is \$21.14; of hens and chickens, from 35,430 persons, in 348 cities and towns, 55 cents each; of hogs, 347 cities and towns being represented by 19,316 persons, \$11.54 each; horses on farms number 61,004, are found in every city and town, are owned by 34,281 persons, and have an average value of \$93.34; milch cows are found on farms in every city and town, 162,847 being owned by 35,325 persons, with an average value of \$37.80; oxen are owned by 4,510 persons, living in 318 different cities and towns, with an average value of \$68.14; pigs are owned in 346 cities and towns by 12,522 persons, the average value being \$3.65; merino sheep are owned by 229 persons in 108 cities and towns, Saxony sheep by 114 persons, in 63 cities and towns, and other kinds of sheep by 2,591 persons in 260 cities and towns. The values range between \$3.52 and \$4.28.

Fruit trees and vines supply many items, but we will consider only apple and pear trees and grape vines. In 343 cities and towns, 37,904 persons own 2,507,538 apple trees, the average value per tree being \$1.98, and the average value of trees owned by each person \$131.20. Pear trees, 356,991 in number, are owned by 24,778 persons in 346 cities and towns. The average value per tree is \$2.10 and per person \$30.27. There are 356,976 grape vines, owned by 18,112 persons, in 337 cities and towns. The average value per vine is 97 cents, and each person owns \$19.15 worth, on an average.

All the property belonging to farms in 1885 was valued at \$216,230,550, while in 1875, on a gold basis, the value was \$187,477,569.

Brought into totals the value of the agricultural property of the State for 1885 is distributed as follows :

CLASSIFICATION OF PROPERTY.	Aggregate Value
THE STATE.	\$216,290,550
Land,	110,700,707
Buildings,	71,118,218
Machines, implements, etc.,	7,397,990
Domestic animals, etc.,	17,055,153
Fruit trees and vines,	6,658,482

A slight departure from the classification of 1875 has been made so far as cultivated and uncultivated land is concerned. In 1875 the land was classified as cultivated land, unimproved land, unimprovable land, and woodland. In the presentations for 1885 land is divided into cultivated land, uncultivated land (including the unimproved and unimprovable), and woodland. The cultivated land embraces all land under crops, market gardens, nurseries, orchards, seed gardens, etc., and cranberry bogs; the uncultivated land includes permanent pasture land, other land which has been unimproved but which is susceptible of improvement, land which is unimprovable, and land containing mines, quarries, pits, etc. The woodland covers all on which wood is grown.

The land constituting the farms in the State by the last three Censuses is shown in the following table :

THE STATE, AND CLASSIFICATION OF LAND.	Basis	1865	1875	1885
THE STATE.	acres	3,235,479 $\frac{3}{8}$	3,402,368 $\frac{5}{8}$	3,898,429 $\frac{1}{4}$
Cultivated land,	acres	881,402	912,521	939,260 $\frac{1}{2}$
Unimproved land,	acres	1,052,374 $\frac{3}{4}$	1,469,988 $\frac{1}{2}$	1,479,454 $\frac{1}{4}$
Unimprovable land,	acres	282,359	89,457 $\frac{1}{4}$	90,212 $\frac{3}{4}$
Woodland,	acres	1,019,343 $\frac{5}{8}$	950,402 $\frac{1}{2}$	1,389,501 $\frac{3}{4}$

By this statement it is seen that the total amount of land in farms has increased. This result is probably due, to some extent, to a finer classification and a more thorough effort to secure completeness.

The results for cultivated land are the best indications of progress. In 1865 there were 881,402 acres; in 1875, 912,521 acres, while in 1885 the cultivated land rose to 939,260 $\frac{1}{2}$ acres. This fact is positive proof that the number of acres cultivated increases in the State, although it is shown later on, in the tables giving the classification of the farm plant and the number of farms, that the number of farms decreases. There has been a constant decrease in the number of farms for many years. This matter, however, is referred to again under "Farm Plant."

The total value of land in 1885, as returned by 45,010 persons, was \$110,700,707, of which the cultivated land was valued at \$59,891,808, the uncultivated land at \$25,529,690, and the woodland at \$25,279,209. The average value to each person of all land was \$2,459.47.

From the tables showing "Land," under agricultural property by name, there have been drawn the three tables following, the first relating to cultivated land, the second to uncultivated land, and the third to woodland. These tables show, for the State and for each county, the distribution of land, by acreage and average value per acre, for both the cities and towns; for the towns only, excluding the cities, and for the cities by themselves. In a fourth table is shown by kinds of land the acreage and average value per acre for each city in detail.

WORCESTER,	7,114	128.37	8,211	50.89	2,923	53.54	18,249	81.52

From the foregoing tables the influence of cities on values is easily determined. For instance, the cultivated land including cities is worth on an average \$63.76 per acre; the cultivated land in the cities, however, is worth \$237.60, while the same class of land in the towns is valued at \$55.05 per acre.

The market gardens have shown a universal increase, not only in number and acreage, but in value; the total acreage in 1875 of the market gardens of the State was 3,988 $\frac{2}{3}$, the total gold value thereof being \$1,024,286, or an average gold value per acre of \$257. In 1885 the total acreage was 8,861 $\frac{7}{8}$, valued at \$3,088,826, or an average value per acre of \$348.

The distribution of market gardens by counties, as to acreage, value, and average value per acre, is shown in the following table:

THE STATE, AND COUNTIES.	Total Acreage in Market Gardens	Total Value of Land in Market Gardens	Average Value per Acre
THE STATE.	8,861 $\frac{7}{8}$	\$3,088,826	\$349
Barnstable,	471 $\frac{1}{2}$	1,700	36
Berkshire,	184 $\frac{5}{8}$	27,987	152
Bristol,	661 $\frac{3}{4}$	77,058	116
Dukes,	40 $\frac{1}{8}$	3,005	75
Essex,	1,580 $\frac{3}{4}$	214,866	136
Franklin,	147 $\frac{1}{4}$	11,325	77
Hampden,	516 $\frac{1}{2}$	67,806	131
Hampshire,	325 $\frac{1}{2}$	22,387	69
Middlesex,	2,825 $\frac{7}{8}$	1,574,062	557
Nantucket,	45 $\frac{1}{4}$	2,225	49
Norfolk,	689 $\frac{7}{8}$	339,773	493
Plymouth,	422 $\frac{1}{4}$	35,533	84
Suffolk,	681	648,732	953
Worcester,	693 $\frac{3}{8}$	62,367	90

From this table it will be seen that very nearly one-third of all the acreage in market gardens is found in Middlesex county, the next in rank being Essex county, with a little more than one-sixth of the total acreage. As regards values, the market gardens in Middlesex county represent more than one-half of the total value, and with respect to average value per acre are second in rank, the average value per acre being \$557, as against an average value of \$953 in Suffolk county, which is the highest average value returned; the average value per acre of market gardens in Norfolk county is \$493.

As shown in the recapitulation to the table giving the percentages of cultivated land, uncultivated land, and woodland, of total land, on basis of acres (pages 765-767), it is seen that in the whole State the cultivated land constitutes 24 per cent of the whole amount of land in farms; the uncultivated, 40 per cent, and the woodland, 36 per cent.

The following table shows the number of cities and towns having the specified percentages of acres of cultivated land, uncultivated land, or woodland; that is, the table shows the number of cities and towns having one per cent, two per cent, or whatever the per cent may be, of each of these three great classes, the highest per cent returned being 93 per cent for cultivated land.

SPECIFIED PERCENTAGES.	NUMBER OF CITIES AND TOWNS HAVING THE SPECIFIED PERCENTAGE OF —			SPECIFIED PERCENTAGES.	NUMBER OF CITIES AND TOWNS HAVING THE SPECIFIED PERCENTAGE OF —

				89 per cent.	—	—	—
				90 per cent.	—	—	—
				91 per cent.	—	—	—
				92 per cent.	—	—	—
				93 per cent.	1	—	—

Summarizing the above showing in detail we have the following concise statement of results :

SUMMARY OF SPECIFIED PERCENTAGES.	NUMBER OF CITIES AND TOWNS HAVING THE SPECIFIED PERCENTAGE OF —		
	Cultivated Land	Uncultivated Land	Woodland
25 per cent or less,	196	45	100
Over 25 but less than 50 per cent,	136	242	194
50 but less than 75 per cent,	11	58	50
75 per cent and over,	5	3	4
Total cities and towns,	348	348	348

Analyzing this summary table, we find for cultivated land that in 196 towns 25 per cent or less of the total farm land is cultivated; in 136 towns over 25 but less than 50 per cent is cultivated; in 11 towns 50 but less than 75 per cent is cultivated, and in 5 towns 75 per cent and over is cultivated, the highest percentage being 93 per cent. The results for uncultivated land and woodland may be similarly analyzed.

FARM LAND, CLASSIFIED BY ACREAGE (page 819), is a table which gives by towns a classification of farm land by number of acres; that is, the number of farms or detached lots in each town under one acre, one and under two acres, two and under three acres, etc., up to 1,000 acres and over.

The classification of farm land, as regards acreage, is shown for the State as follows:

SPECIFIED ACREAGES.	Number of Persons making return	SPECIFIED ACREAGES.	Number of Persons making return
THE STATE.	45,010	THE STATE—Con.	
Under 1 acre,	201	90 and under 100 acres,	2,390
1 and under 2 acres,	411	100 and under 150 acres,	4,864
2 and under 3 acres,	525	150 and under 200 acres,	2,567
3 and under 5 acres,	1,095	200 and under 300 acres,	1,645
5 to 10 acres, both inclusive,	3,242	300 and under 400 acres,	424
Above 10 and under 15 acres,	2,560	400 and under 500 acres,	159
15 and under 20 acres,	2,525	500 and under 600 acres,	67
20 and under 30 acres,	4,181	600 and under 700 acres,	32
30 and under 40 acres,	3,737	700 and under 800 acres,	16
40 and under 50 acres,	3,218	800 and under 900 acres,	12
50 and under 60 acres,	2,633	900 and under 1000 acres,	9
60 and under 70 acres,	2,200	1000 acres and over,	16
70 and under 80 acres,	2,408	Not given,	225
80 and under 90 acres,	1,525	Detached lots,	2,123

From this table is readily seen the comparative sizes of farms, and the results need not be analyzed in detail. Of the whole number of persons making a return of farm land (45,010) but 735 have returned farms exceeding 300 acres, 424 being of 300 and under 400 acres, 159 being of 400 and under 500 acres, while 152 are from 500 to 1000 acres and over.

Owing to a difference in classification of farm land as regards acreage in 1875, any comparison with the results for 1885 is not possible, except in the following instances:—In 1875 there were 724 returns of farm land as being under 3 acres and in 1885 there were 1,137 such returns; for those from 3 to 5 acres there were 896 in 1875 and 1,095 in 1885; while for those from 5 to 10 acres, both inclusive, there were 2,694 in 1875 and 3,242 in 1885. Beyond this point the classifications differ and the comparisons cannot, therefore, be extended to cover farm lands of all the various sizes.

FARM PLANT (page 833) includes the buildings requisite for housing the family, products, and animals, and the implements, and carts, wagons,

harnesses, etc., necessary for carrying on the mechanical work of the farm.

The number of farms in the State constitutes an interesting feature of the Census and is, at the same time, a number most difficult to determine accurately. In 1865 the State Census showed that there were 47,014 farms; this number was evidently too high, as it must have included many lots of land cultivated or carried on for agricultural purposes, to be sure, but not as farms.

In 1875 the number of farms was stated to be 44,549, thus showing a slight loss as against the number in 1865. In 1875 the Census Office considered a farm to be the home of a farmer, his workshop, and his means of obtaining a subsistence; this definition included certain appliances to enable him to carry on successfully the work of the farm, such appliances or adjuncts comprising arable soil for crop land, pasture land for stock, woodland from which to obtain material for fuel, fencing, etc., and all the buildings necessary for housing family, products, and animals. Under this definition the Census of 1875 showed that there must be 44,549 farms having the necessary adjuncts; there were, however, but 43,620 dwelling-houses returned as being on farms.

In the Census of 1885, for purposes of tabulation, each schedule returned has been considered as representing a farm, although 2,123 of these schedules were for detached lots of land, many of which were carried on as farms, but without having farmers residing upon them.

The number of schedules, therefore, returned under the Census of 1885 must be taken as representing farms for purposes of comparison with 1875, but proper eliminations are made in the consideration of the table showing "FARM PLANT."

In 1885 there were returned 45,010 schedules, this number representing farms proper, detached lands carried on as farms, market gardens, orchards, seed gardens, etc. The total acreage shown by these 45,010 schedules was 3,898,429 $\frac{1}{4}$ acres, as already stated, showing an average of 86.61 acres, as against an average of 76 acres in 1875.

The total value of the land and buildings returned for this number of farms and detached lots in 1885 was \$185,118,925, or an average value of \$4,112.83, as against \$3,660, in gold, in 1875.

Every county in the State shows an increased average value of land and buildings on farms in 1885 over 1875. This increase is specially noticeable in the county of Nantucket, where the average value in 1885 is more than twice that of 1875. This result is due, undoubtedly, to the increased importance of Nantucket as a place of summer residence. The farm land has had its value enhanced, consequently, in the same manner as the farms in towns adjoining large cities or in the suburban parts of cities themselves.

The distribution of farm land, by total acreage, average acreage, total value, and average value, by counties is shown in the table on the succeeding page.

THE STATE, AND COUNTIES.	Number of Farms, etc.	Total Acreage	Average Acreage	Total Value (Land and Buildings)	Average Value (Land and Buildings)
THE STATE.	45,010	3,898,429 $\frac{1}{4}$	86.61	\$185,118,925	\$4,112.83
Barnstable,	1,170	84,344	72.09	3,017,749	2,579.27
Berkshire,	3,928	547,689 $\frac{3}{4}$	139.43	17,014,403	4,331.57

Plymouth,	2,779	251,319 $\frac{1}{8}$	90.43	10,084,703	3,628.90
Suffolk,	204	4,712	23.10	5,592,367	27,413.56
Worcester,	9,813	847,280 $\frac{1}{2}$	86.34	32,952,410	3,358.04

From the recapitulation for the State on page 840, we see that 23,321 persons had dwelling-houses, barns, other buildings, implements, and carts, etc., on their farms. In the next class, "other buildings" only are omitted from the detail given above and 8,505 persons reported such items of farm plant. There were 2,873 persons who reported farms with no buildings.

On pages 841 and 842 appear 133 details of the classification of buildings, implements, etc. The head-note on page 841 explains the showing thoroughly and need not be repeated here. From it we learn the actual number of farms in the Commonwealth, on the Census Day, November 15, 1885, to have been 42,026. This total is secured by adding together 40,509 farms with dwelling-houses, barns, etc., as shown on page 843, 439 with barns, etc., and 1,078 outlying farms with no buildings. There were omitted from the grand total 45,010 a number amounting to 2,984, these lots of land not having the necessary adjuncts of a farm. This number, 2,984, was composed of 144 with dwelling-houses, stables, etc., 490 with dwelling-houses, other buildings, etc., 9 with stables, etc., 544 with other buildings, etc., 257 with implements, etc., 13 with carts, wagons, etc., and 1,527 with no buildings.

FARMS, MARKET GARDENS, ETC.: NUMBER OWNED, HIRED, AND WORKED ON SHARES (page 845). This table presents the number of farms in each city and town in the Commonwealth classified as to those that are owned by the proprietors, those hired, and those worked on shares. The number of owners returned for the whole State is 40,112; of those hiring their farms, 3,243; 683 are worked on shares, while in 972 cases out of the total number of persons carrying on farms, etc. (45,010) the enumerators made no return as to whether the farms were owned, hired, or worked on shares.

In a supplementary table, for the State, on page 852, is given a distribution of farms, etc., owned, hired, and worked on shares, according to

acreage and value, together with percentages and averages of acreage and value. From this table it is seen that the 41,084 (including the 972 farms concerning which no information was returned) farms, etc., which are owned represent 3,599,770 $\frac{1}{4}$ acres, or 92.34 per cent, out of a total acreage of 3,898,429 $\frac{1}{4}$; those hired (3,243) represent 219,396 acres, or 5.63 per cent, and those worked on shares (683) represent 79,263 acres, or 2.03 per cent. Of the total value of farm land, or \$110,700,707, the farms owned are valued at \$100,132,138, or 90.41 per cent; those hired, at \$8,747,428, or 7.94 per cent, and those worked on shares, at \$1,821,141, or 1.65 per cent of the total value. The average acreage of farms owned is 87.62, and the average value \$2,437; for farms hired the average acreage is 67.65 and the average value \$2,697; while for farms worked on shares the average acreage is 116.05 and the average value \$2,666, the average acreage for all farms, etc., being 86.61 and the average value \$2,459.

PERSONS ENGAGED IN AGRICULTURE (page 853). On examining the returns for "Farm Population" as given on the agricultural schedules, it was found that all the members of the family, whether actually engaged in the work of the farm or not, were so universally included that in consequence any tabulation of the results would be unreliable and statistically valueless. The statement of persons engaged in agriculture has been drawn, therefore, from the returns of occupations made on the population schedule and not from the returns made by the farmers themselves. By the enumeration of the occupations of the people, as shown in Volume I. (Part 2) of the Census reports, the total number of persons engaged in agriculture, including farm owners and hired farm laborers, male and female, was 77,661, these being classified as follows: farmers, 36,526; farm laborers, 35,545; other persons not included in these two classifications, 5,590. In 1875 the entire number given as engaged in agriculture was 70,945, including proprietors or owners of farms, as well as farm hands; the farm hands numbered 35,488, while the proprietors, as near as it could be ascertained, numbered 35,457. In 1865 the total number engaged in agriculture was 68,538.

TOTAL WAGES PAID IN AGRICULTURE (page 861). The total wages paid in agriculture in 1885 was \$6,390,252, while in 1875 the total wages paid for farm labor on a gold basis was \$5,000,820, but in neither year did the total amount of wages paid in any way represent the time or labor of the proprietors, nor could an average daily or monthly wage paid to farm laborers be given with certainty, because a farm hand working, perhaps, one month for one farmer and one or more months for another farmer must, of course, be reported as a person hired by each proprietor. In busy seasons many hands are hired and at the close of the season are discharged. It is impossible, therefore, to establish an average wage between two farm laborers; certainly such an average to be derived by dividing the total wages paid by the total number employed would be thoroughly misleading.

FERTILIZERS (page 867). The results, for the State, as to fertilizers purchased and compounded show that 18,123 persons carrying on farms purchased 31,067,607 pounds of manufactured or commercial fertilizers, the same being valued at \$576,540, while 541 farmers compounded 3,875,584 pounds of fertilizers, of the value of \$27,296.

FORESTRY (page 875). Chapter 55, Resolves of 1884, provided that there should be incorporated in the schedules for taking the decennial Census of 1885 such inquiries as should determine, so far as practicable, the acreage of the woodland in the Commonwealth of over and under thirty years' growth, the average age at which the forests of the Commonwealth are now cut, and such other inquiries as might be practicable in order to determine fully the facts as to the cultivation, production, and depletion of the forests throughout the Commonwealth. But little could be done under this resolve, although much discussion as to the scope of the inquiries occurred in consultation with a special committee of the Board of Agriculture. It was finally concluded that the following inquiries would cover, so far as practicable, all that was intended by the resolve, namely, to secure for the woodland the acreage and value of wood of thirty years' natural growth or less, of over thirty years' natural growth, and the value of the wood grown from seeds or transplanted seedlings; also the kinds of wood and lumber cut during the Census year, the average age of trees at the time of cutting, and the value of the timber or wood, whether growing or cut, destroyed by forest fires during the Census year.

From the recapitulation of agricultural property by name, on page 817, giving the classification of land, etc., for the State, it will be seen that of woodland having a growth of over 30 years, there were 317,297 acres, valued at \$8,770,459, being an average value per acre of \$27.64. This amount of woodland was returned by 14,067 persons, the average value of such woodland to each person being \$623.48. Of woodland having wood of 30 years' growth or less, there were 992,563½ acres, valued at \$15,189,962, being an average value per acre of \$15.30. The number of persons owning this quantity of woodland was 33,305, being an average value to each person returning the same of \$456.09, much of the land in the two classifications just mentioned being detached land. The number of acres of woodland grown from seeds or transplanted seedlings was 5,913, valued at \$83,471, being an average value of \$14.12 per acre. It was impossible to classify as to the number of years' growth 73,728½ acres, valued at \$1,235,317. It is to be regretted that there are no statistics for the past with which these interesting statements can be compared.

From the recapitulation, for the State, of the "Forestry" table proper (page 927), we find that there were 31,990 cuttings of wood of all kinds during the Census year. Of this number of cuttings 6,591 were of beech and birch, 3,420 of chestnut, 4,957 of maple, 6,756 of oak, 5,602 of pine,

and 4,664 of all other kinds not specified by name. The distribution of these cuttings by age of trees at time of cutting is given in detail in the recapitulation referred to. In this connection it should be borne in mind that the results just mentioned apply only to the number of cuttings for the different kinds of wood cut, and do not indicate, in any sense, the number of persons cutting, as one person may have cut more than one kind of wood during the Census year, and of a different growth, so far as the age of the trees at time of cutting is concerned.

The average age of the trees at the time of cutting and by different kinds of wood is shown by the recapitulation on page 930. This recapitulation shows, for the State, that the average age of trees cut for wood and lumber during the Census year, that is, 1885, was 32.27 years; the average age of beech and birch at time of cutting being 30.40 years; of chestnut, 32.54 years; maple, 31.15 years; oak, 32.11 years; and pine, 32.50 years. Six towns and cities, namely, Marblehead, Nahant, CAMBRIDGE, SOMERVILLE, Hull, and CHELSEA, had no woodland subject to inquiries, while from thirteen towns no returns were received from the enumerators relating to the kind of wood or timber cut, or the age at time of cutting. Other than these omissions the returns by towns are very complete on these points.

DESTRUCTION BY FOREST FIRES (page 931). This table gives in detail by cities and towns the value of timber or wood, whether growing or cut, destroyed by forest fires, together with the number of persons making such returns. From the recapitulation to this table, on page 934, it is seen that for the whole State there were 451 persons who reported a total loss by forest fires during the Census year of \$82,254. Of this amount \$24,347 was reported for towns in Worcester county and \$10,121 for towns in Hampden county.

SILOS AND ENSILAGE. It has been a mooted question as to the benefit derived from the use of ensilage, and an effort was made in the recent Census to collect such facts as might be available in order to determine the scientific value of this kind of food. A section of the agricultural schedule was arranged, the inquiries of which related to the number of silos in use in the State, their aggregate capacity, the materials of which constructed, and the aggregate cost of the same. The inquiries also covered the various agricultural products used for ensilage, the cost of making it from each class of products, the total value and amount of ensilage fed out as fodder during the Census year, as well as its relative food value in proportion to good English hay. This class of information, however, proved more difficult for the enumerator and the farmer than that relating to dairy products, and the answers given were so varied and in so many cases incomprehensible that, beyond the number and location of silos, the returns are practically of no value.

To secure with any degree of accuracy the information sought would require experts with a knowledge sufficient to enable them to make

calculations and to determine on the spot, in each case, the relative food value, so as to express the proportion in exact and in uniform terms.

There were 811 owners who returned 1,029 silos, these silos being distributed in the cities and towns as follows :

DOMESTIC ANIMALS PURCHASED IN OTHER STATES AND IN FOREIGN COUNTRIES. From information returned on the agricultural schedules, relating to domestic animals purchased in other States and in foreign countries, we find, for the State, that 704 persons purchased in other States than Massachusetts 8,251 domestic animals, valued at \$215,134, while 33 persons imported 314 domestic animals, valued at \$45,490.

Mr. Robert T. Swan, chief of the division of agriculture, had charge of the enumeration of the statistics of agriculture and has also superintended the tabulation and verification of results, handling the mass of details with great ability and accuracy and bringing it into shape for presentation. The work connected with the tabular presentations and typographical arrangement has been under the general supervision of Mr. Chas. F. Pidgin, the chief clerk, and Mr. William C. Hunt, the second clerk, of the bureau.

To these three gentlemen, whose zeal and fidelity cannot be too highly commended, I am under great obligations.

C. D. W.

BUREAU OF STATISTICS OF LABOR,
20 BEACON STREET, BOSTON,
December, 1887.

ADDITIONS, CORRECTIONS, ETC.

Since the printing of the showing of "AGRICULTURAL PRODUCTS AND PROPERTY BY TOWNS," the following errors have been discovered and corrected. These are typographical, mainly, or such as were caused and discovered by the receipt and revision of supplementary returns, after that part of the volume had gone to press. The additions and corrections affect only the results given on pages 7-565, as shown in the following tabular form. In the recapitulation of city and town aggregates of products and property, pages 566-583, and all subsequent tables, the corrected figures appear.

AGRICULTURAL
PRODUCTS AND PROPERTY.
BY TOWNS.

AGRICULTURAL PRODUCTS AND PROPERTY.

Tabular Presentations.—The following tables present a classified showing in detail of agricultural products and property for each city and town in the State, and comprehend the agricultural products of farms, market gardens, orchards, nurseries, and seed gardens; dressed poultry and other products of poultry yards; the products of home manufacture, including "work done" on articles taken from factories and elsewhere, for the year ending November 15, 1885, and agricultural property as it existed November 15, 1885.

The returns of products and property presented in these tables do not show necessarily the aggregate quantities and values of such articles in the State, or in any one town even, but are the results as returned only by persons engaged in agriculture. For a more particular explanation of these points, see the "ANALYSIS" of this volume.

The presentation of agricultural products and property by towns covers pages 1 to 565 inclusive, and is followed by recapitulations of the aggregates for products and property, by classified titles only, and a table showing the percentages of value of products of value of property, by counties, cities, and towns, and for the State, on pages 566 to 583 inclusive.

The principal agricultural products are presented by name on pages 587 to 729 inclusive, with a complete showing for the State of all agricultural products and articles of domestic manufacture by name on pages 730 to 734 inclusive. In this showing for the State are given not only the total quantities and values, but the average values, the number of cities and towns making return of such products, the number of persons making return, and the average values to each person. A recapitulation of aggregate values, for the State, of agricultural products by classified titles is given on page 735, besides a showing for the State of 17 principal crops, with acreage.

A similar showing of agricultural property by name is given on pages 737 to 816 inclusive, with a complete showing for the State of all kinds of agricultural property by name on pages 817 and 818. This showing of agricultural property by name, for the State, presents for each kind of property, in addition to the total quantity and total value, the average value, the number of cities and towns making such return, the number of persons making return, and the average value to each person, and is followed by a recapitulation of aggregate values, for the State, of agricultural property by classified titles, on page 818.

Classified Titles.—The classified titles used in the presentation of agricultural products and property are as follows:

<p>PRODUCTS. Animal Products. Clothing, Needle-work, etc. Dairy Products. Food Products. Greenhouse Products. Hothouse and Hotbed Products. Liquors and Beverages. Nursery Products. Poultry Products. Wood Products. Wooden Goods. Other Products.</p>	<p>PRODUCTS—Concluded. Cereals. Fruits, Berries, and Nuts. Hay, Straw, and Fodder. Meats and Game. Vegetables.</p> <p style="text-align: center;">PROPERTY.</p> <p>Land. Buildings. Machines, Implements, etc. Domestic Animals, etc. Fruit Trees and Vines.</p>
--	---

Quantities.—In presenting quantities the following abbreviations are used: bbls., for barrels; b'nch's, for bunches; bot's, for bottles; bu., for bushels; doz., for dozen; gals., for gallons; lbs., for pounds; M, for thousand; M ft., for thousand feet; qts., for quarts; and yds., for yards. In all other cases the basis, when used, is spelled out in full. Where no basis is given number is meant, and where no basis is needed, the value being given simply, a dash is used in the column denoting quantity.

For certain agricultural products, the word "sale" or "use" follows in parenthesis the name of the article, according as the quantities and values returned were for articles sold to other parties or used by the family of the producer.

Values.—The values of products have a wide range. Products for sale have a uniform price in localities, while those for use are given according to the individual opinion of the producer. Where the value is apparently too high or too low for the products used, the quantity used is correct, however, and, for this reason, valuable. Products raised in small quantities are returned at relatively high average prices. This is conspicuously so for

such products as pumpkins, which if raised for table use are valued at several cents per pound, but if in large quantities for fodder are returned at very low prices, although the great quantity grown shows that they are considered of some value. The rule of using dollars and not cents makes some products raised in small quantities average too high. An adjustment has been made, so far as possible, in the Census Office, but single bushels or other small quantities of a product which have a value exceeding one-half but under one dollar must necessarily appear as of the value of one dollar. Unusual products or quantities, as well as extremely high or low values, have been investigated by correspondence or otherwise.

The values of property are undoubtedly too low, the farmers being inclined to undervalue, from an erroneous impression that their statement may affect taxation. To avoid giving any information which can be traced to an individual, when less than three owners of a certain kind of building, machine, or animal appear in the town, such property is not given in detail but is included as a part of the return for "other buildings," "other machines," or "other animals." The number and value of buildings, machines, and animals of each and every kind is given in the showing of agricultural property by name for the State. Cities, and towns near them, show high values for both products and property, and manufacturing towns show high values for products. Towns having many summer residents show high values for both property and products; high for property because of fine residences and blooded stock, and high for products because a retail market able and willing to pay high prices is at hand for the permanent resident farmers.

The valuation of trees has a decided effect upon the aggregate value for agricultural property in towns; apple trees have been returned in most towns at from \$1 to \$2 each, whereas in a town, where \$4 seems to have been fixed upon as the value, there is an increase in valuation of \$60,000 above what the value would have been if the trees had been returned at the usual price for other towns.

PRODUCTS.

Clothing, Needle-work, etc. — Under this classification the articles made for sale only are included. The value of "work done" on articles taken in from factories and shops is given, and when possible to obtain it, the number of such articles is also given. It is apparent that in some cases where no mention is made of "work done" that it must be the value of the "work done" and not the value of the whole article, as for rag carpeting the value of "work done" in the weaving only is intended, although the product is called carpeting.

Dairy Products. — The total quantity of milk produced and the total quantity of cream produced and sold or used as cream are given. The cream used for butter made on the farm, though very generally included in the returns, has been deducted. The butter made at creameries has been very generally returned as having been made on the farm, but has been deducted whenever the fact could be ascertained, the butter given in the table being that made only on the farm. In towns where large quantities of cheese are returned the amount is undoubtedly the product of factories and not farms, and to a certain extent is a duplication, which it has been impossible without great expense to justify.

Hothouse and Hothead Products. — Values in this case have a wider range than in any other, but have been verified by correspondence or otherwise.

Liquors and Beverages. — It may be fairly assumed that the returns of cider will be duplicated on the returns of cider mills in the Census volume relating to Manufactures, the farmers in most of the towns having returned as a domestic manufacture cider made for them at the cider mills. In towns showing very small quantities the return is for the cider made on the farms only.

Other Products. — This classification includes such agricultural or domestic products as are not related to and cannot be classed under any other of the headings.

Wood Products. — A division of the products which may have been returned under the general term of "lumber" has been made, to show so far as possible, logs, long lumber, box-boards, etc.; in some cases, however, where lumber is given at a very low value, logs are undoubtedly included. The products of saw mills, though often returned on farm schedules, have been deducted and will be included in the volume devoted to "Manufactures."

Fruits, Berries, and Nuts. — Apples were so plenty that in many cases they were not gathered or if gathered were returned as of little value. The large quantities of berries and nuts gathered by persons not connected with agriculture are not included.

Meats and Game. — Only meats dressed on the farm should have been returned by the farmer, but the cattle, sheep, and calves sold to the butcher have generally been returned at dressed weight, and will be duplicated to a certain extent by the returns of butchers made on the schedules for "Manufactures." The return of pork is undoubtedly correct as the killing of hogs is done chiefly on the farm.

Vegetables. — In some instances vegetables raised under glass have values much above the average. Under the term "Not classified" are included the vegetables raised in kitchen gardens for use, in quantities too small to give in detail.

PROPERTY.

Land. — Orchards are so generally mowed that in very many cases they have been returned as hay land, and not as orchards. In some towns unimprovable land will be found to have been returned as of no marketable value; in others, while a majority of such land in the town was considered valueless, a part was returned as of value, making the average value of the land, as a whole, very low. For each town in which this occurs, proper explanation is made in a foot-note. In the case of salt marsh which is mowed, while it is unimprovable for agricultural purposes, it is often assessed for its prospective value for other purposes and is returned at its assessed valuation. The value of vacant and unused pasture land, tillage land, and woodland, owned by non-residents, has been taken from the assessors' lists. In the few towns where the assessors do not classify the land, a classification has been made according to the average price of similar land returned by the farmers in the respective towns. The occasional instances of duplication by the return of the same land in towns adjoining will be offset by omissions.

In the case of farms located in more than one town, the return was made for the town in which the dwelling-house was situated.

In the showing of agricultural products and property by towns (pages 1-565) the total number of acres and total value of cultivated land, uncultivated land, and woodland are not given, but are presented in detail by towns in the tables devoted to LAND, on pages 739-761.

Domestic Animals, etc. — High priced dogs owned by fanciers, though kept on a farm, have not been considered as farm property.

Guinea fowls, pigeons, and other feathered animals are classified as domestic animals, etc., and are, by reason of the small number of persons making return, sometimes included in the designation "other animals;" in some towns, therefore, this will account for the apparently low value of "other animals."

Fruit Trees and Vines. — In a few towns no fruit trees or vines were returned, but reference is made in each town to such omission in a foot-note. In certain towns, also, no apple trees were returned by many farmers nor by other persons making returns of agricultural property. Occasional returns have been made of very large numbers of trees at a very low valuation, the trees in such cases undoubtedly being small trees in nurseries, not of bearing age.

AGRICULTURAL PRODUCTS BY NAME — Continued.

CHEESE.

[In some of the towns showing very large quantities for sale, the cheese made at factories from milk supplied by farmers has been returned undoubtedly as a product of the farm.]

LIQUORS AND BEVERAGES.

CIDER.

[The cider returned as a product of the farm is usually made for the farmer at a cider mill, and will be, necessarily, included in the returns of cider mills, under "Liquors: malt, distilled, and fermented," in the volume on Manufactures.]

AGRICULTURAL PRODUCTS BY NAME — Continued.

RECAPITULATION. FOR THE STATE.

[The "Quantity" and "Value" columns in this Recapitulation are State aggregates for all the Products given by Name. Products marked with an asterisk are given in detail by towns on pages 587-729, *ante*. In the consideration of these State aggregates, reference to the explanatory notes on pages 3-6 of this Volume will often be found of value.]

CLASSIFICATION OF PRODUCTS.	Basis	Quantity	Value	Average Value	Number of Cities and Towns making return	Number of Persons making return	Average Value to each Person
<i>Animal Products.</i>							
Beeswax (sale),	pounds	673	\$3,218,444	-	-	-	-
(use),	pounds	296	242	\$0.36	65	97	\$2.49
Calf skins,		12,707	12,818	1.01	258	2,203	5.82
Candles (sale),	pounds	1,913	249	0.13	36	42	5.93
(use),	pounds	29,514	4,063	0.14	180	1,198	3.59
Hides,		7,493	27,048	3.61	247	2,067	13.09
Honey,	pounds	94,258	17,737	0.19	277	1,102	16.10
Manure, *	cords	643,800 $\frac{1}{2}$	3,090,189	4.80	348	37,825	81.70
Pelts,		6,944	4,570	0.66	170	558	8.19
Wool, merino*	pounds	27,738	6,548	0.24	75	167	39.21
Saxony*	pounds	16,913 $\frac{1}{2}$	4,476	0.26	62	157	28.51
other than merino or Saxony,*	pounds	212,893	50,408	0.24	227	2,121	23.77
<i>Clothing, Needle-work, etc.</i>

PRINCIPAL AGRICULTURAL PRODUCTS, WITH ACREAGE. FOR THE STATE.

[The whole number of persons making return of the quantities raised of the seventeen principal crops presented below did not make corresponding return as to the acreage devoted to each crop; the proportion of the returns of acreage was highly satisfactory, however, for 91+ per cent of the producers raising the seventeen crops supplied the figures showing the number of acres used for each crop. The aggregate quantities and values for each of the seventeen crops were naturally less when only those returns were included that contained acreage, but this loss was small, for in the acreage showing 90+ per cent of the aggregate quantity and 95+ per cent of the aggregate value, of the seventeen crops, as given on pages 730 to 731, for the State, are represented.]

That the acreage showing is thoroughly representative and correct is shown by the fact that the average values per bushel, ton, pound, etc., as derived from the State figures on pages 730-734 were very nearly identical with the average values derived from the acreage returns.

Only one presentation of "average yield per acre" needs explanation, that being the product per acre — 174.71 bushels — for "Onions." This figure being but little over half of the average yield per acre reported in 1875 the returns were examined and the small average explained. In the towns in which onions are cultivated as a special crop the return per acre ran comparatively very high. Thus, in Danvers the average yield per acre, for onions, was found to be 376 bushels; in Newbury, 313 bushels; in Peabody, 325 bushels; in Sunderland, 352 bushels; and in Revere, 358 bushels. In these five towns, representing a little more than one-fifth of the acreage returned as devoted to onion culture, the product was 131,634 bushels or very nearly half the product for the entire State, the average yield per acre for the five towns combined being 375 bushels. For the remainder of the State, an average of but 117 bushels per acre is secured. Averages always denoting the mean, or middle figure, the State average of 174.71 bushels per acre is explained and sustained for it is the mean, or middle figure between the high and low figures previously indicated.

Of the total acreage of cultivated land in the State, or 933,269½ acres, the acreage returned for the seventeen crops amounted to 753,193½, or 80.20 per cent of the whole cultivated area. The average value of yield per acre, for the seventeen crops, for the State, was \$49.15, on an average value per acre for all cultivated land of \$63.76, or a gross return of 39+ per cent per acre.]

FARM PLANT BY TOWNS—Continued.

CLASSIFICATION OF FARM PLANT, IN DETAIL. FOR THE STATE.

[This showing gives the total number of persons in the State making a return of "Farm Plant," and is presented in order to show the distinguishing features of farm plant as regards farms, market gardens, orchards, nurseries, seed gardens, etc.

As shown on page 843 in the summary of the classification of farm plant, 40,509 persons stated that their farm plant consisted of dwelling-houses, barns, etc. These 40,509 returns, then, represent that number of farms. To this number should be added the 439 persons who reported that their land contained barns, etc., for if a farmer has a dwelling-house upon one of his farms it is not absolutely necessary that he should also have a dwelling-house upon an outlying farm. In the case of 1,457 persons making a return, as shown in six lines of detail in the summary, their land did not contain the necessary buildings, etc., to constitute them farms. Of the 2,605 persons making return that there were no buildings upon their land, an examination of the returns shows that 1,078 were outlying farms, being connected with farms that were supplied with the necessary farm plant.

In order to arrive at the exact number of farms in the State it is only necessary, therefore, to aggregate the three classes indicated by the figures 40,509—439—and 1,078—which gives an aggregate of 42,026 farms in the Commonwealth.]

* Concerning which no information was returned as to whether they were owned, hired, or worked on shares.

† Includes the 972 farms, etc., shown in the above Recapitulation as "not given."

PERSONS ENGAGED IN AGRICULTURE.

PERSONS ENGAGED IN AGRICULTURE.

[The results for "Persons Engaged in Agriculture," shown in this table, are taken from Part 2, of Volume I., of the Census of 1885, being derived from the returns of occupations made on the population schedule, and not from the returns made by farmers, etc., as explained in the ANALYSIS to this volume.]
